

Writing a Literature Review

From the Unit One approved list I have been considering three topics. These are all in the area of education as that is my current job.

23. The impact of modern technology on student learning experiences in higher education.
24. Utilising and adapting IoT technology in secondary education in a country of your choice.
25. The Implementation of E-Learning.

Proposed Topic Area:

Use of digital technology to make learning more engaging in further education.

Possible Focus:

Examining how technology is implemented in further education, with a particular interest in computer science or technology-related courses.

Guiding questions.

1. What is the focus and aim of your review? Who is your audience?

The review will focus on how digital tools and technology based methods can support active and engaging learning in further education. The aim is to evaluate current research on the effectiveness of technology integration in teaching computer science.

The audience will include educators, curriculum designers and managers in further education who are planning or delivering technology-related courses.

2. Why is there a need for your review? Why is it significant?

As someone currently teaching in further education, I am developing an Information Technology course based on a new syllabus. Understanding how technology can enhance learning could help improve course design, increase student motivation and make lessons more interactive. The review will also help identify common barriers and success factors in using technology in classrooms.

3. How will you locate and select sources for inclusion in the review?

- Google Scholar
- ResearchGate
- University library's
- JSTOR
- ScienceDirect)
