

Presentation Notes

As the case study is set in the 1980s, I aimed to reflect that era in the presentation's style. I designed an introduction slide using period appropriate colours and added a royalty free music track from that time to reinforce the theme.

I created the slide deck in PowerPoint, using built in animations and transitions.

To record the presentation, I used OBS. This was a valuable experience, as my students are required to produce a video each year. Although I should have done this before, it was my first time making one myself. I now better understand the anxiety they often feel during the process.

Since I could not deliver a perfect recording in one take, I needed to edit the footage. I used DaVinci Resolve to edit and render the final MP4, improving both the quality and timing of the presentation.
